EXAMINER'S STATEMENT OF REASONS FOR ALLOWANCE

1. This communication is an Examiner's reasons for allowance in response to application filed on 9/5/03, assigned serial 10/656675 and title "Object collision avoidance system for a vehicle".
2. The following is the Examiner's statement of reasons for the indication of allowable subject matter:

After carefully reviewing the application in light of the amended claims and the additional search of all the possible areas relevant to the present application, a set of related prior art references has been found, but those prior art references are not deemed strong to make the application unpatentable. Thus, it is found that the application is now in condition for allowance.

As per claims 2, and 18, the prior art of record does not disclose a collision avoidance system and method for a vehicle, comprising: memory that stores a plurality of location profiles, each location profile associated with a different operational location of the vehicle, wherein each location profiles defines at least one alarm limit for each of sensors suitable for the current location of the vehicle; a vehicle collision avoidance controller that communicates with a plurality of sensors and that triggers a warning device when sensor signal that is associated with one of plurality of sensors exceeds a respective one of alarm limits in selected location profile; a location profile selection device that allows user selection from among plurality of location profiles from memory as the vehicle travels among various locations; and a location setting module that allows at least one of creation, editing and deletion of location profiles as the vehicle travels among various locations. This limitation in combination with the other elements in the claim was not shown or suggested by the prior art.

Art Unit: 3661

As per claim 11, the prior art of record does not disclose a collision avoidance system for a vehicle, comprising: memory that stores a plurality of location profiles, each location profile associated with a different operational location of the vehicle, wherein each location profiles defines at least one alarm limit for each of sensors suitable for the current location of the vehicle; an automatic location profile selection module that receives position signals and that automatically selects one of location profiles based on position signals; and a vehicle collision avoidance controller that communicates with a plurality of sensors and that triggers a warning device when sensor signal that is associated with one of plurality of sensors exceeds a respective one of alarm limits in selected location profile. This limitation in combination with the other elements in the claim was not shown or suggested by the prior art.

Claims 2-9, 11-16 and 18-23, are allowable over the prior art of record.

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dalena Tran whose telephone number is 571-272-6968. The examiner can normally be reached on M-F 6:30 AM-4:00 PM), off every other Friday.
